

Teacher Digital Skills & Smart Classroom Starter Guide

A practical, classroom-grounded digital skills guide covering curriculum-focused technology integration, interactive presentation design, smart display management, child online protection, responsible cloud backups, accessibility, and low-resource offline alternatives.

PDF Guide	25 Mins	Primary, Junior & Senior Teachers	Version 1.0 (2026 Edition)

Pedagogy First: Curriculum-Focused Tech Integration

Technology in the classroom is never an end in itself; it is an instructional catalyst. The most powerful EdTech interventions occur when teachers choose digital tools that deepen critical inquiry, expand access for struggling learners, and render abstract concepts concrete and visual.

Golden Rule of Smart Classrooms:

Never use a screen to do poorly what paper or physical realia does brilliantly. Use technology to do what was previously impossible.

The SAMR Framework for Kenyan Teachers

SAMR Level	Pedagogical Impact	Kenyan Classroom Exemplar
Substitution	Tech acts as a direct substitute with no functional change.	Learners read a PDF textbook on a tablet instead of a printed physical book.
Augmentation	Tech provides functional improvement to learning tasks.	Learners read an e-book with interactive glossaries, search features, and voice narration.
Modification	Significant task redesign and collaborative transformation.	Learners collaborate simultaneously on a cloud document to research and write a joint report.
Redefinition	Creation of new tasks previously inconceivable.	Learners produce a multimedia documentary, interview a remote marine biologist via video call, and publish a virtual gallery.

Classroom Presentations, Interactive Displays & Device Routines

The 6x6 Presentation Rule for Educator Slides

Classroom projections should illuminate, not overwhelm:

- ✓ **Maximum 6 lines of text** per slide, and **maximum 6 words** per line.
- ✓ **High Visual Contrast:** Deep navy/black text on pure white/off-white background for classrooms with ambient sunlight.
- ✓ **Minimum 28pt Font Size:** Ensures the learner at the farthest corner of a 45-student classroom can read comfortably.
- ✓ **Authentic Visual Anchors:** Replace stock clip art with diagrams, regional maps, high-resolution photographs, and infographics.
- ✓ **Single Concept Focus:** Dedicate each slide to one learning point; use progressive reveals rather than walls of text.

Smartboard & Interactive Display Management

Classroom Device Routine	Standard Operating Procedure (SOP)
Pre-Lesson Warm-up (5 mins prior)	Power on display, test audio channels, pre-load tabs and videos offline to bypass unexpected connectivity drops.
Learner Board Interaction	Encourage learners to manipulate diagrams, draw arrows, and label charts directly on the touch surface to cultivate agency.
End-of-Day Power & Screen Care	Proper shutdown sequence (avoid pulling power plugs directly); clean glass with microfibre cloth (no harsh solvents).

Managing Classroom Tablets & Laptops

When deploying shared devices in schools:

- ✓ **The "Screens Down / Lids at 45°" Command:** Immediate signal for all eyes on the teacher during verbal explanations.
- ✓ **Numbered Device Assignment:** Assign specific roll numbers to hardware to ensure accountability and track handling.
- ✓ **Battery Charging Rotation:** Charge devices systematically at the end of morning sessions to avoid dead batteries during PM lessons.

Child Online Protection, Cloud Backups & Low-Resource Strategies

Child Online Protection & Safe Educational Search

Kenyan educators must guarantee learner digital safety under the Kenya Data Protection Act (2019):

Safety Domain	Recommended Protocol
Search Engine Filtering	Enforce Google SafeSearch, Bing Safe Search, or use child-friendly engines (Kiddle, KidRex).
Student Personally Identifiable Info (PII)	Never post student full names, admission numbers, grades, or geotagged photos on public social media.
Cyberbullying Response	Immediate screenshot logging, private counselling, non-retaliatory reporting protocol, and parent notification.

Responsible Cloud Storage & Backup Hierarchy

Protect your schemes of work, lesson plans, and assessment spreadsheets with the **3-2-1 Backup Strategy**:

- ✓ **3 Copies of Data:** 1 primary working copy, and 2 separate backups.
- ✓ **2 Different Media Types:** 1 on your laptop/tablet drive, and 1 on a portable USB flash drive.
- ✓ **1 Cloud Storage Vault:** Synced to Google Drive or Microsoft OneDrive with two-factor authentication enabled.

Low-Resource & Offline Strategies (No Internet / Power Outages)

Resilience in Rural & Sub-County Schools:

Unstable internet or power cuts should never halt digital learning. Equip your classroom with offline solutions:

- ✓ **Offline Digital Encyclopedias:** Install *Kiwix* on laptops to access full Wikipedia, PhET Science simulations, and Wiktionary without internet.
- ✓ **Local Hotspot (RACHEL / Micro-Server):** Deploy a battery-powered Raspberry Pi or phone hotspot to distribute lesson materials locally.
- ✓ **Pre-recorded Voice & Video Clips:** Download YouTube educational videos in 720p onto a flash drive beforehand.

The 8-Point Digital Resource Quality Checklist

Before introducing any third-party app, YouTube video, or digital worksheet to your class, evaluate it against these 8 criteria:

#	Quality Dimension	Verification Standard
1	Curriculum Alignment	Directly addresses specific KICD learning outcomes for the target grade and strand.
2	Age & Cognitive Appropriateness	Vocabulary, pacing, and visual complexity match the developmental stage of the learners.
3	Cultural & Local Relevance	Reflects positive Kenyan and African contexts, names, locations, and cultural realities.
4	Factual Accuracy	Free from scientific errors, historical inaccuracies, or outdated statistical data.
5	Ad-Free & Privacy Safe	No commercial advertisements, pop-ups, gambling promotions, or predatory tracking scripts.
6	Accessibility (UDL)	Provides closed captions for videos, alt text for images, and legible color contrast.
7	Interactivity & Agency	Prompts learners to actively think, decide, or manipulate content, rather than passively watching.
8	Technical Efficiency	Loads quickly on entry-level Android devices and operates seamlessly offline.

Mandatory Curriculum-Context Notice:

This independently prepared professional resource supports the implementation of Kenya's competency-based curriculum. Teachers should verify grade-specific strands, sub-strands and learning outcomes against the latest official KICD curriculum designs.
